EDUCATION

Engineering programme (Master's level, in progress) — Computer and Network Engineering, Cybersecurity
EMSI, Casablanca | 2022–2027

- Coursework: networks, systems administration, intrusion management, web security, cryptography, cloud security.

General Baccalaureate — Mathematics, Physics-Chemistry, Advanced Mathematics option
Lycée Charles Péguy, Orléans | 2019–2022

PROFESSIONAL EXPERIENCE

Cybersecurity intern | Nethash, Paris · GitHub 07/2026 – 09/2026

- Automated Nmap scans with Python and Cron to map the exposed attack surface.
- Analysed GVM/OpenVAS findings in Docker; assessed and prioritised them using CVE references, CVSS scores and EPSS.
- Generated technical reports from GVM exports using Python and GitHub Actions.

Full-stack web development intern | SIMDATA, Orléans 07/2025 – 08/2025

- Created mock-ups and designed a platform connecting craftspeople and clients; developed it with Django, MySQL and HTML/CSS/JavaScript.

TECHNICAL SKILLS

Systems and networks: Linux, Windows, TCP/IP, SSH, Python, Bash
Vulnerabilities and automation: Nmap, GVM/OpenVAS, CVE/CVSS, EPSS, Cron, GitHub Actions
Detection and investigation: Elastic Security, Wazuh, Sysmon, MITRE ATT&CK
Cloud and containers: AWS (IAM, VPC, EC2), Terraform, Docker
Security testing: Burp Suite, Netcat, command injection, reverse shell

PROJECTS AND ACHIEVEMENTS

Elastic Security — detection lab · GitHub

- Collected Linux, Windows and Active Directory logs; tested KQL/EQL rules with simulated attacks, then investigated alerts.

Terraform Security Lab — container infrastructure · GitHub

- Provisioned a local Nginx frontend and a backend without a host port using Terraform/Docker; segmented networks and ran containers as non-root.
- Documented configuration checks with TFLint and Checkov, plus container-image scanning with Trivy.

Linux pentest — VulnHub DC-4 · GitHub

- In an isolated lab: Nmap reconnaissance, command injection, a reverse shell and privilege escalation to root through Sudo.

Academic project — cryptography and steganography · Report 2025–2026

- Built AES-256-CBC modules and a Flask application integrated with an LSB steganography pipeline; report and presentation.

CERTIFICATIONS AND TRAINING

AWS Academy Graduate – Cloud Security Foundations | AWS | 10/2026
Ethical Hacker | Cisco Networking Academy | 10/2026
Sound the Alarm: Detection and Response | Google | 11/2026
Foundations of Cybersecurity | Google | 11/2026
AWS Academy Graduate – Cloud Foundations | AWS | 10/2026
