PROFESSIONAL EXPERIENCE

Cybersecurity intern | Nethash, Paris · GitHub 07/2026 – 09/2026

- Automated attack-surface scans with Nmap, Python and Cron.
- Identified and analysed vulnerabilities with GVM/OpenVAS in Docker; classified findings using CVE/CVSS.
- Automated technical reports with Python and GitHub Actions.

Full-stack web developer intern | SIMDATA, Orléans 07/2025 – 08/2025

- Platform connecting craftspeople and clients: Python/Django, MySQL, HTML/CSS/JavaScript.

TECHNICAL SKILLS

Vulnerabilities & automation: Nmap, GVM/OpenVAS, CVE/CVSS, Python, Cron, GitHub Actions

Detection & investigation: Elastic Security, Wazuh, KQL/EQL, Linux/Windows/Active Directory logs, MITRE ATT&CK

Infrastructure & cloud: AWS IAM/VPC/EC2/Security Groups, Terraform (IaC), Docker, network segmentation

Security testing in labs: Burp Suite, Netcat, command injection, Linux enumeration, Sudo

TECHNICAL PROJECTS

Elastic Security — SIEM detection · GitHub

- Collected Linux/Windows/Active Directory logs with Elasticsearch, Kibana, Fleet and Elastic Agent.
- MITRE ATT&CK-aligned KQL/EQL rules validated through simulated attacks; investigated alerts.

Terraform Security Lab — container infrastructure · GitHub

- Local IaC: Nginx frontend and HTTP Echo backend on two Docker networks, one internal.
- Non-root containers without Linux capabilities; no published backend port; verified Docker controls.

VulnHub DC-4 — Linux penetration test in a lab · Portfolio

- Nmap reconnaissance, Burp Suite web testing, command injection and a Netcat reverse shell.
- Linux enumeration and root escalation through a misconfigured Sudo rule.
